Plants Around Us

Discover the fascinating world of plants around us!

DEFINITION

> Plants are living things that grow in soil, need sunlight, and help us breathe. They come in many shapes and sizes and are essential for life on Earth.

KEY CONCEPTS

Types of Plants

Plants can be classified into trees, shrubs, and herbs based on their size and structure.

Parts of a Plant

Plants have different parts like roots, stems, leaves, flowers, and fruits, each serving a special purpose.

Plant Growth

Plants grow from seeds and need water, sunlight, and nutrients from the soil to thrive.

Importance of Plants

Plants provide oxygen, food, and shelter for many living creatures, including humans.

Plant Habitats

Plants can be found in various habitats like forests, gardens, and deserts, adapting to their environments.

EXAMPLES

→ A tall mango tree in the garden.

→ Colorful flowers blooming in spring.

→ Green grass covering the playground.

MEMORY TIPS

★ Remember 'T-S-L-F' for Types: Trees, Shrubs, Leaves, Flowers.

★ Think of 'Roots Hold' to recall the function of roots.

★ Use 'Sun-Water-Soil' to remember what plants need to grow.

COMMON MISTAKES

✗ Confusing trees with shrubs due to size.

✗ Forgetting the role of flowers in reproduction.

✗ Not recognizing that all plants need sunlight.

QUICK RECAP

Plants are essential living organisms that come in various types and have important parts. They require sunlight, water, and nutrients to grow and play a vital role in our ecosystem.
