# Colours

Explore the Vibrant World of Colours!

## DEFINITION

Colours are the different shades we see around us. They make our world beautiful and help us express feelings.

## KEY CONCEPTS

### Primary Colours

These are the main colours: red, blue, and yellow. They cannot be made by mixing other colours.

### Secondary Colours

These colours are made by mixing two primary colours, like green (blue + yellow).

### Warm Colours

Warm colours include red, orange, and yellow. They often make us feel excited or happy.

### Cool Colours

Cool colours like blue, green, and purple create calm and relaxing feelings.

### Shades and Tints

A shade is made by adding black to a colour, while a tint is made by adding white.

## EXAMPLES

→ The sky is blue.

→ A ripe banana is yellow.

→ Grass is green.

## MEMORY TIPS

★ Remember 'ROYGBIV' for rainbow colours: Red, Orange, Yellow, Green, Blue, Indigo, Violet.

★ Think of a traffic light: Red means stop (warm), Green means go (cool).

★ Use the phrase 'Sunset is warm, Ocean is cool' to recall warm and cool colours.

## COMMON MISTAKES

✗ Confusing primary and secondary colours.

✗ Mixing up warm and cool colours.

✗ Forgetting that shades are darker and tints are lighter.

## QUICK RECAP

Colours enrich our lives and help us communicate emotions. Remember the primary and secondary colours, and how warm and cool colours affect our feelings.
