Master Chess Pieces and Their Moves!

DEFINITION

> Chess pieces are the different characters in the game, each with unique moves. Understanding how each piece moves is essential for playing chess effectively.

KEY CONCEPTS

Pawn Movement

Pawns move forward one square but capture diagonally. On their first move, they can move two squares.

Rook Movement

Rooks move in straight lines, either horizontally or vertically, any number of squares.

Bishop Movement

Bishops move diagonally across the board, also any number of squares.

Knight Movement

Knights move in an 'L' shape: two squares in one direction and then one square perpendicular.

Queen Movement

Queens can move any number of squares in any direction: horizontally, vertically, or diagonally.

King Movement

Kings move one square in any direction, making them the most important piece to protect.

EXAMPLES

→ A pawn moves from e2 to e4 on its first move.

→ A rook moves from a1 to a5.

→ A knight jumps from b1 to c3.

MEMORY TIPS

★ Remember 'Pawns Push, Knights Jump' for basic movements.

★ Think 'Rooks and Bishops are straight and diagonal' for their paths.

★ Use 'Queen's Power' to recall she moves like both a rook and bishop.

COMMON MISTAKES

✗ Moving pawns backward or forgetting to capture diagonally.

✗ Confusing the rook's straight movement with the bishop's diagonal.

✗ Not using the knight's unique jump ability effectively.
