What is HTML Basics

Unlock the web with HTML basics for kids!

DEFINITION

HTML, or HyperText Markup Language, is the standard language used to create web pages. It helps structure content on the internet using tags and elements.

KEY CONCEPTS

HTML Tags

Tags are special codes that tell the browser how to display content. They usually come in pairs, like <tag> and </tag>.

Elements

An element includes a start tag, content, and an end tag. For example, This is a paragraph. .

Attributes

Attributes provide additional information about an element, such as Link where 'href' is an attribute.

Head and Body

The <head> section contains meta-information, while the <body> section contains the content visible to users.

Lists

HTML allows you to create ordered (<ol>) and unordered (<ul>) lists to organize information.

EXAMPLES

→ <h1>Welcome to HTML!</h1>

→ This is a simple paragraph.

→ Visit Example

MEMORY TIPS

★ Remember: HTML is like a recipe, tags are the ingredients!

★ Think of <head> as the brain and <body> as the body of a person.

★ Use 'A' for attributes to remember they add details to tags.

COMMON MISTAKES

✗ Forgetting to close tags, which can break the layout.

✗ Using incorrect tag names or misspellings.

✗ Placing content outside of the <body> section.

QUICK RECAP

HTML is the foundation of web pages, using tags to structure content. Remember key concepts like elements, attributes, and the difference between head and body for a solid understanding.
