What is Garden Plants

Discover the Wonderful World of Garden Plants!

DEFINITION

> Garden plants are plants grown in gardens for beauty, food, or enjoyment. They can be flowers, vegetables, or herbs.

KEY CONCEPTS

Types of Garden Plants

Garden plants can be categorized into flowers, vegetables, and herbs, each serving different purposes.

Growing Conditions

Plants need sunlight, water, and good soil to grow healthy and strong.

Plant Care

Regular watering, weeding, and fertilizing are essential for maintaining garden plants.

Seasons and Growth

Different plants thrive in different seasons; understanding this helps in planning a garden.

Pollination

Many garden plants rely on insects or wind for pollination to produce seeds and fruits.

EXAMPLES

→ Tomatoes are popular garden vegetables.

→ Roses add beauty and fragrance to gardens.

→ Basil is a common herb used in cooking.

MEMORY TIPS

★ Remember 'Fruits, Flowers, and Foliage' for types of garden plants.

★ Use the acronym 'SWAG' for Sun, Water, Air, and Good soil for plant care.

★ Think of 'Seasons' as a calendar to remember when to plant different types.

COMMON MISTAKES

✗ Overwatering plants can lead to root rot.

✗ Planting flowers that aren't suited for the local climate.

✗ Neglecting to check for pests and diseases.

QUICK RECAP

Garden plants are essential for beauty and food in our lives. Understanding their types, care, and growth conditions is key to successful gardening. Remember to consider seasons and pollination for optimal results.
