What is Sharks

Discover the fascinating world of sharks!

DEFINITION

> Sharks are large, powerful fish known for their sharp teeth and keen senses. They live in oceans and are important predators in marine ecosystems.

KEY CONCEPTS

Types of Sharks

There are over 500 species of sharks, ranging from the tiny dwarf lantern shark to the massive whale shark.

Shark Anatomy

Sharks have a unique body structure with a cartilaginous skeleton, gills for breathing, and multiple rows of teeth.

Habitat

Sharks are found in various ocean environments, from shallow coastal waters to deep sea regions.

Diet

Most sharks are carnivorous, feeding on fish, seals, and sometimes even other sharks.

Shark Behavior

Sharks are known for their hunting techniques, including ambush and pack hunting strategies.

EXAMPLES

→ Great White Shark is famous for its size and hunting skills.

→ Hammerhead Sharks have a unique head shape that helps them see better.

→ Tiger Sharks are known for their striped patterns and diverse diet.

MEMORY TIPS

★ Remember 'SHARK' - Sharp teeth, Habitat, Anatomy, Reproduction, Knowledge.

★ Visualize a shark fin to recall their presence in oceans.

★ Think of 'Great Whites' as the 'greatest' predators in the sea.

COMMON MISTAKES

✗ Confusing sharks with other fish like rays or skates.

✗ Overgeneralizing that all sharks are dangerous to humans.

✗ Not recognizing the importance of sharks in ocean ecosystems.

QUICK RECAP

Sharks are diverse marine animals known for their unique anatomy and predatory skills. They play a crucial role in maintaining the health of ocean ecosystems. Remember their different species and behaviors for your exam!
