DEFINITION

> Garden design is the art of planning and creating outdoor spaces. It involves choosing plants, layouts, and features to enhance beauty and functionality.

KEY CONCEPTS

Garden Layout

The arrangement of plants, pathways, and features in your garden. A well-planned layout improves accessibility and visual appeal.

Plant Selection

Choosing the right plants based on climate, soil, and personal preference. Healthy plants thrive in suitable conditions.

Color Schemes

Using colors effectively to create mood and harmony in the garden. Complementary colors can enhance visual interest.

Garden Features

Incorporating elements like benches, fountains, or sculptures to add character. Features can serve as focal points.

Maintenance Planning

Considering the upkeep required for your garden design. A sustainable design minimizes long-term maintenance efforts.

EXAMPLES

→ Create a flower bed with a mix of perennials and annuals for continuous blooms.

→ Design a pathway using gravel or stepping stones to guide visitors through the garden.

→ Incorporate a seating area surrounded by fragrant plants for relaxation.

MEMORY TIPS

★ Use the acronym 'PLANT' for Layout, Plants, Aesthetics, Nature, and Time.

★ Visualize your garden as a room with different sections for each function.

★ Associate colors with emotions: blue for calm, red for energy, yellow for cheer.

COMMON MISTAKES

✗ Neglecting to consider sunlight and shade when placing plants.

✗ Overcrowding plants, leading to competition for resources.
