Beginner lessons for Color Correction

Master Color Correction for Stunning Photos!

DEFINITION

> Color correction is the process of adjusting the colors in an image to achieve a natural look. It helps enhance the overall quality and mood of your photos.

KEY CONCEPTS

White Balance

Adjusts the colors to make the image look more natural under different lighting conditions.

Exposure Adjustment

Modifies the brightness of an image to ensure details are visible in highlights and shadows.

Saturation Control

Increases or decreases the intensity of colors to make them more vibrant or muted.

Contrast Enhancement

Adjusts the difference between light and dark areas to add depth and dimension.

Hue Shifting

Changes the overall color tone of an image, allowing for creative effects.

EXAMPLES

→ Adjust white balance to remove yellow tint from indoor photos.

→ Increase saturation to make sunset colors pop.

→ Lower exposure to recover details in bright highlights.

MEMORY TIPS

★ Remember 'WESC' for White balance, Exposure, Saturation, Contrast.

★ Think of 'Color Wheel' for understanding hue adjustments.

★ Use 'Bright vs. Dark' to recall contrast adjustments.

COMMON MISTAKES

✗ Over-saturating colors, making images look unnatural.

✗ Ignoring white balance, leading to color casts.

✗ Neglecting exposure adjustments, resulting in lost details.

QUICK RECAP

Color correction is essential for enhancing photo quality. Focus on white balance, exposure, saturation, and contrast for optimal results.
